

RESUME TAILOR SKILL

Step-by-step instructions · YPCA Career Sprint

Before you start

By the end of this part, you'll have a personal Claude skill saved to your account. From then on, tailoring your resume for any job takes one step: paste the job posting. You need your Master Profile, your finished base resume, and Claude.

Turning on Skills

1. Open Claude settings.

In `claude.ai`, click your profile picture or initials in the bottom left corner, then click "Settings."

2. Turn on Code Execution and File Creation.

Go to the "Capabilities" section and turn this setting on if it isn't already. Skills won't work without it.

Tip: This is a one-time setup. If the exact menu names look slightly different on your screen, look for anything called "Skills" or "Capabilities," or ask for help.

Creating your skill

3. Go to Skills.

In Settings, find "Customize," then "Skills."

4. Create a new skill.

Click the button to create or add a new skill (usually a "+").

5. Open the skill file and copy it.

Open `Resume_Tailor_Skill.md` from the shared folder and select all the content, then copy it.

6. Paste it in and save.

Paste the full content into the new skill, give it the name "resume-tailor," and save. Make sure the skill is toggled on.

Tip: You are only doing this once. After today, this skill stays on your account and works in every future chat.

Using it, today and every time after

7. Start a new chat.

Go to `claude.ai` and open a new conversation.

8. Attach your Master Profile and your resume.

Attach both your `YourName_Master_Profile.md` file and your `YourName_Resume.docx` file.

9. Paste a job posting.

Copy the full text of a job posting you're interested in and paste it into the chat, then say something like "tailor my resume for this job."

10. Send.

Claude will recognize this as a resume tailoring request, apply the skill automatically, and give you back a complete tailored resume as a downloadable Word file, along with a short summary of what changed and your ATS match score.

***Tip:** Every future job application is this simple: new chat, attach your two files, paste the posting, send. You never need to re-explain what you want.*
